In regards to Outfall 001, we are working now with Tim Sullivan, the USS Env manager for the Tin Mill. They have opened and inspected manholes upstream ("upsewer") on their Tin Mill property, and have found some oil and oil sheen in the sewers in these sections. This upstream section of the sewer has very low flow, but there is some discharge. They are actively looking for sources in the operation, and Friday and all next week they will be working to clean out these sewer sections with Vacuum Trucks.

Once we get these upstream sections cleaned up, I intend to place absorbent pads in the Outfall 001 containment structure in order to completely pick up any remaining sheen in there. Meanwhile, as required, we will have Vacuum trucks vac off the surface in the Outfall Containment area.
